About us:

Having manufactured office seating now in five consecutive decades, we at **OCISitwell** realize that the look of an office chair and the consumer needs have changed. That is why over the past eight years we have transformed our thinking and designs to meet today's ever-changing environments. The ultimate goal has been making a quality product at a good value in a timely manner.

Founded in 1974, owned and operated as a family business to date, we have grown from a small facility in Whittier, CA to our current facility in Santa Fe Springs, CA. We have 60,000 square feet of manufacturing space to make what we think is the best value in the industry.

We started making budget wood seating many years ago and have grown into a company making a wide selection of products for the contract market today. Our main philosophy has been that our commitment to customer satisfaction begins from the time an order is placed to well after the customer has received their chair. With over 38 years of experience in manufacturing office seating, we maintain the highest industry standards by standing behind our product with a full written guarantee. Our success is also attributed to the many representative, dealers and customers who have been affiliated with our company. Because of these efforts, **OCISitwell** has become a name that means reliability.

At **OCISitwell** our products range from Executive, Conference, Guest, Reception and Soft seating. Through our relationship with Momentum Textiles, CF Stinson, Mayer and many other textile firms we offer a palette of over 500 fabrics from which to choose. As part of our service, we offer lead times that range from 2-3 weeks. These lead times are some of the best and most reliable in the industry. Our chairs meet ANSI-BIFMA X5.1-2002 certified by an independent laboratory. They are engineered, designed and constructed to conform to the proper ergonomic dimensions as defined by the "National Standard for Human Factors".

In today's ever-changing office environment, **OCISitwell** has positioned itself in providing a product that is a great value, produced in a timely manner with many options from which to choose. Please take a look at our many products.

Sustainability/Footprint:

The Biosphere is the global ecological system integrating all living things and their relationships. In other words, it is the Earth and everything that lives on it and is sustained by its existence.

From one viewpoint, the Biosphere is a zero-sum game. Mankind probably didn't fully comprehend that until after WWII when the returning GI's started buying shiny new automobiles, which spawned the creeping of suburbia, which eventually led to a consumption boom, which necessitated the exponential explosion of technology.

In the latter part of the 20th century, the world finally realized that we are the stewards of this globe and we determine its fate; which means we determine our fate. At that time, a few forward thinkers began to sound the alarm, but it wasn't until the dawn of the 21st century that the multinational corporate world figured out that this wasn't a drill; there are no do-overs regarding the Biosphere. It really is a zero-sum game.

OCISitwell may not fit into the category of a multinational but we certainly understand our responsibility to minimize our disruption to the Biosphere. There are many "green" bandwagons out there to jump on, but our gut feel tells us that we want to reach these goals –

- Use as much recycled material in the manufacture, fabrication and administration of our products in order to minimize the effect on our world's natural resources.
- Design our products so that as much material as possible is recyclable, that is, can be reused in the making of other products. This minimizes the impact on the world's waste disposal systems.
- Finally, to create products that, during their functional life, emit as few toxic or harmful contaminants as possible. Although invisible, these emissions accumulate to destroy organic and, eventually, human life.

Recycled material is interesting; there is both post-consumer waste recycling [old tires can get ground up and used as input for new tires] and post-industrial [manufacturing rejects, setup waste, overruns]. Because the technology [and therefore the cost] of recycling post consumer waste to any significant extent is still in the lab stage, most companies are in the post industrial recycling category.

Specifically, **OCISitwell** uses raw materials [and office materials] that all have some percentage of recycled input. [the percentages are ever changing, please ask your rep for current details].
